### What's New In?

Windows Close Button Resizer is a tiny and portable piece of software that enables you to customize the size of the close buttons in all applications by modifying their width. Windows Close Button Resizer Key Features: Windows Close Button Resizer Free Download1. Field of the Invention The present invention relates to a method for producing an acrylic polymer dispersoid, and more specifically, the present invention relates to a method for producing an acrylic polymer dispersoid which is able to impart a highly adhesive characteristic and a high discharge capacity to a battery. 2. Description of the Related Art In the case that polymers are compounded in a battery, the polymer is usually prepared in the form of a polymer dispersoid. The polymer dispersoid is highly adhesive to, for example, an electrolyte in a battery, and is able to prevent the precipitation of the polymer during the formation of the battery. As a method for producing a polymer dispersoid, a method using a sol-gel process, a method using a colloid process, and a method using a suspension polymerization process have been disclosed. With respect to the method using the sol-gel process, it is known that the method has advantages in that the amount of a solvent used is small and gel formation occurs slowly as compared to the other methods. Examples of the method using the sol-gel process include a method using a solution of a di- or tri-functional organic halide in a volatile solvent such as, for example, an acetylene glycol (see, for example, Japanese Patent Application Laid-open No. H05-174501). However, the organic halide used in the method has high toxicity and is difficult to handle. As a result, the method is problematic from the viewpoint of safety. In order to solve the problems, it is necessary to perform the polymerization in a completely anhydrous condition. However, this inevitably leads to the activation of the polymerization and there is a concern that the yield of the polymer is lowered. With respect to the method using a colloid process, a method using a chloromethylated polymer (see, for example, Japanese Patent Application Laid-open No. H06-169389), a method using a dialkyl maleate (see, for example, Japanese Patent Application Laid-open No. H08-202855) and the like have been disclosed. However, these methods have a concern that the solubility of the polymer to a solvent for preparation of the polymer
